OCEANIC  
INNOVATION FIRST

## SPECIALTY COURSE COMPUTER DIVING

### Computer Diving

Having learnt to dive and already familiar with calculating the manual Dive Tables the **Computer Specialty** Program will provide the clear advantages of using a Dive Computer.

The age of the computer is here and has continued to be developed in line with Diving demands that are now required to be met by the Dive Community as a whole making for informed divers. Informed divers are Safe Divers who can take advantage of the opportunities to dive deeper and maximise their bottom times.

The choice of computers on offer and here at **BCDA** have developed through choice, demand and the requirements that are met from today's technology and advanced by informed evolution. We encourage all our Divers to have a better understanding and knowledge of their computer and the best choice for your diving.

Through **Home Study** & here at our dive centre you will be informed by;

- ◆ The various types of Dive computers available
- ◆ Using computer time to maximize bottom time safely
- ◆ Using computers for repetitive diving
- ◆ Getting the most from your dive vacation
