

'A Professional, fun and Safe Diving Environment'

OCEANIC
INNOVATION FIRST

SPECIALTY FISH ID / REEF ECOLOGY

We Love To Dive and here at **BCDA** we like our divers to become ecologically Fish Aware.

Diving provides us with serene aspects of Fish and Coral life to be found here.

Off the Geraldton Coast we are fortunate to have both temperate and tropical Marine Life available to us fed by the Leeuwin Current.

Logging our dives is a sure way of keeping and recording memories and the fish life we have experienced on our dives.

So what better way than accessing greater awareness to be able to Identify the Life you see on your Dives.

On this course you will learn to Identify the Marine Life and account the impact on the reef systems becoming ecologically aware.

- ◆ Identify plant life
- ◆ Coral species
- ◆ The variety of fish life
- ◆ Vertebrates
- ◆ Invertebrates
- ◆ Symbiotic relationships underwater

So start recording your memories and be informed with the species of Life to be found on your doorstep. It is a whole new environment waiting your exploration.
